Plant Cytogenetics | Taylor & Francis Group

Cytogenetics is the study of the chromosomes of the human body and the diseases that are related to those body units which can be caused by an abnormal number or structure of the chromosomes. These studies are carried out through microscopic techniques. It is important to remember that chromosomes are structures that are located in the cell nucleus and that are composed of DNA, histones, RNA ...

Barbara McClintock (June 16, 1902 - September 2, 1992) was an American scientist and cytogeneticist who was awarded the 1983 Nobel Prize in Physiology or Medicine. McClintock received her PhD in botany from Cornell University in 1927. There she started her career as the leader in the development of maize cytogenetics, the focus of her research for the rest of her life.

Cerrado is a biodiversity hotspot that has lost ca. 50% of its original vegetation cover and hosts ca. 11,000 species belonging to 1,423 genera of phanerogams. For a fraction of those species some cytogenetic characteristics like chromosome numbers and C-value were available in databases, while other valuable information such as karyotype formula and banding patterns are missing. In order to ...

Barbara McClintock - Wikipedia

CLASSICAL PLANT CYTOGENETICS. The field of plant cytogenetics was heavily influenced by Barbara McClintock's pioneering work on maize (*Zea mays*). Her method for unequivocal identification of individual chromosomes permitted major discoveries regarding the structure and dynamic behavior of the maize genome []. Using carmine-based chromatin staining procedures, McClintock showed that all of the ...
